## POWER TO PROTECT – THE RIGHT COST TO SERVE

Honeywell Power is proud to announce our new line of Video power supplies that provide 12VDC at 5.5 amps or 11 amps of total output power (HP1205 and the HP1210 series). Our new Video supplies offer individual electronic circuit protection, battery backup and removable terminal blocks for a faster installation. Since your security system is only as good as the power behind it, you can rely on Honeywell to be your trusted partner in keeping your buildings safe and secure.

- Class 2, Power limited outputs.
- Built in battery charger on selected models
- Removable output terminal blocks for quick installation
- Diagnostic LEDs for quick troubleshooting.
- Automatic switch over to stand-by battery.

## SECURING YOUR FUTURE SAFETY WITH IP COMMUNICATIONS

Honeywell Power is excited to announce our new line of Burglar alarm communicators. The MIP-2 and the MIP-2UD are used to replace legacy POTS lines and increase alarm transmission speeds in order to keep your monitored buildings secure. They will communicate with any contact-id burglar panel and connect to any type of customer-provided Ethernet 10/100 based network in order to communicate with a central monitoring station.

## GOING “RETRO” HAS NEVER BEEN THIS PROFITABLE!

### HPFF8 and HPFF12 NAC Fire Extenders

Honeywell Power's programmable end of line retrofit feature saves the time of locating each EOL resistor by allowing the installer to program the power supply to monitor existing EOL's already installed. This can help save hours of time and effort making fire retrofit jobs the newest way to increase profitability!

## FIRE COMMUNICATIONS MADE SIMPLE

The IPGSM-4G Fire communicator is the solution to lowering facility costs and increasing RMR by eliminating costly and unreliable POTS lines. This communicator provides secure fire communications by using GSM only, Fire only or both IP and GSM together for a failsafe solution. The IPGSM-4G simply connects to the DACT of any contact-id Fire Alarm control panel which no additional Fire panel configuration required. Reducing your customer's facility costs has never been simpler!
